

CORCORAN

A person is standing in a studio, wearing a VR headset and holding two VR controllers. The background is a plain, light-colored wall. To the right, there is a camera on a tripod. The overall scene is dimly lit, with the person and the text being the main focus.

Fab Lab & Print Services/F21

Need large format ink-jet prints? Laser jobs and 3D prints to submit to the service bureau?

As of Monday, November 8 the old google form for submitting jobs will be going away. Use the PaperCut portal:

<https://go.gwu.edu/CSADservice>

**Note: if you on a campus network,
that link will take you directly to the portal;
if you are not on campus, you'll need
to connect to the campus network
using VPN software.**

What Is a Virtual Private Network?

February 06, 2018

The George Washington University's [virtual private network \(VPN\)](#) allows remote access to many university systems and resources whether you're located on campus or miles away. It does this by creating a "virtual" encrypted channel from your remote location back to GW's network.

Here are the benefits installing GW's VPN:

- Offers a seamless connection through an encrypted tunnel. The VPN service allows you to access campus resources seamlessly, but with an additional layer of protection.
- Protects your data. Passwords alone aren't good enough anymore when it comes to protecting your personal information, and our systems and networks. [Two-step authentication](#) and [Virtual Private Networks \(VPNs\)](#) helps protect your information with more than a password.
- Provides an additional layer of security and privacy when traveling. It's hard to know whether a Wi-Fi network is trustworthy, so make sure you always use a VPN when connecting mobile devices or laptops in hotels, airports, or coffee shops.

[Download Cisco AnyConnect VPN Client](#)

For more info, and free VPN software, go to:

<https://it.gwu.edu/what-virtual-private-network>

More...

Macintosh HD > Applications > Cisco > Cisco AnyConnect Secure Mobility Client.app

1 of 5 selected, 5.91 TB available

In AnyConnect, underneath the 'Ready to Connect' message in the white space, type `https://go.vpn.gwu.edu/` and click on Connect

Use your NetID (GW email address WITHOUT @gwu.edu) and the associate password to log in.

Now you can access the portal from anywhere!

If connected successfully you'll see a brief message and the AnyConnect bar will hide away and you'll see the Cisco AnyConnect icon in your Windows task bar or Mac menu bar.

Next time you launch and connect to Cisco AnyConnect, the <https://go.vpn.gwu.edu/> will be replaced by GWVPN which you can select to reconnect.

For large-format printing, files should either be submitted as flattened .PSD or as .PDF. This will ensure that fonts and embedded images print properly. Most apps will "Save as..." or "Export" as PDF files. When saving from Creative Cloud apps, set the Adobe PDF Preset to "High Quality Print"

Drag your files into the dropzone at the top of the form. You CAN submit multiple files in a single job. Note: DO NOT submit multipage documents—each page should be a separate file.

Flagg B148!

Shelves with finished jobs.

Large-format print submission guidelines:

We accept print files with output sizes larger than 11" x 17" up to 44" wide x 10' long on Epson Enhanced Matte paper. We run the jobs as-is: make sure your document is set up to the desired output size. Files 11" x 17" or smaller will be rejected (they can be printed on color copiers.)

We do not print full-bleeds; ensure 1/4" margin on your art. (If you submit an 18" x 24" job with a full bleed we will scale it down slightly to run on a 24" wide roll.)

We do not trim finished prints; you'll need to trim finished prints in your studio. You may want to add a bounding box or trim marks.

Files should either be submitted as flattened .PSD, .JPG or as .PDF. This will ensure that fonts and embedded images print properly. Most apps will "Save as..." or "Export" as PDF files. When saving from Creative Cloud apps, set the Adobe PDF Preset to "High Quality Print" If you are submitting a .PSD or .JPG, make sure the image resolution is at least 180ppi.

We do not accept multipage documents; each print should be submitted as a separate file; for example, if you have multiple boards in a multipage InDesign file, each page should be submitted as a separate job.

Laser cutting and engraving submission guidelines:

Use the [Illustrator template](#) for preparing your file, then save as .PDF and upload your finished work via the submission form. The template is set up in the correct color mode and has the correct color swatches built in: **the laser is very picky** and requires RGB colors. Artboards set to the CMYK color space will output the wrong colors, even if you manually choose the correct RGB values.

Be sure to indicate which material you wish to cut/engrave.

If there is type/text in your artwork, convert the type to outlines, to ensure the correct font.

3D printing submission guidelines:

Use the Makerbot Print software to prepare your file. Arrange, size and apply print settings to your .STL file(s) on the build plate; Then go to "File > Save Project As..." and upload the saved .PRINT file via the submission form.

Desktop milling submission guidelines:

Go to our [GitHub site](#) to view some important parameters. Save your file as a .STP/.STEP if you can, or .STL if needed. View the documentation for the modeling program you are using if you don't know how. You will need to provide the material to be machined. We recommend providing extra in case any testing needs to be performed or there were issues with the file.
